TERRA NOVA TRUSS TNT

Two leaders serving leaders **like you!**

Welcome to **the big leagues!**

- ✔ **Extensive** Product Range
- ✔ **High Volume** and **Custom Solutions**
- ✔ **Large Project** Handling
- ✔ **Timely** Delivery
- ✔ **Support** that **meet expectations**

Let's build **success** together!

Services for your needs. **All of them!**

ROOFS

Allow our talented and experienced team to create truss packages that are cost effective and compliant with the Ontario Building Code. Through the use of software, each truss is designed to meet an engineer's specifications. Once in the manufacturing facility, our Virtek laser system ensures that production meets your expectations of precision and reliability.

FLOORS

Prefabricated floor panels can be designed and produced by **TRS** and **TNT** using our advanced production techniques, the panels will arrive on site ready for installation in a fraction of the time that it would take to stick frame. We produce our own pre-engineered floor trusses, designed and manufactured in our locations. Engineered I-Joists, EWP, LVL and GluLam products are just a piece of our complete offering to be the single source provider.

WALLS

Whether you are looking for panels for a single-family home or a larger commercial construction, the team at **TRS** and **TNT** can provide an engineered solution in a timeline that is right for you. Our design software ensures that each panel that we manufacture meets our exacting standards and provides time and cost savings for our job sites.

LUMBER PACKAGES

For framing crews that are looking to build panels themselves at the job site, we can provide engineered drawings as well as the required materials. We have a variety of joists, beams, hardware, and other materials available for full package orders that will keep your site efficient and organized.

SUPPLY AND INSTALL

TRS and **TNT** has the ability to provide framing services for the installation of our prefabricated products. The framing crews that we utilize are familiar with our panelized materials and trusses allowing them to efficiently and safely install your next project.
